ℹ *orcid.org/0000-0002-6338-4086*

OVERVIEW

Associate Professor at the geophysics department of Observatório Nacional, Brazil. Specialist in numerical methods for processing and interpreting potential fields (gravity and magnetic).

APPOINTMENTS

Associate Professor of Geophysics	2017–
Observatório Nacional, Rio de Janeiro, Brazil	
Assistant Professor of Geophysics	2013–2016
Observatório Nacional, Rio de Janeiro, Brazil	

RESEARCH INTERESTS

- **Equivalent layer technique:** computationally efficient methods for processing and interpreting large potential field data sets.

- **Inversion of gravity and/or magnetic data:** methods to invert gravity and/or magnetic data for the purpose of estimating the position and shape of geological bodies.

- **Magnetization of geological bodies:** methods for estimating the magnetization direction of geological bodies by using land and airborne magnetic data.

- **Magnetization of rock samples:** methods for estimating the magnetization distribution within rock samples by using scanning magnetic microscopy data.

- **Magnetic modelling of geological bodies:** methods for computing the demagnetizing field within geological bodies having high susceptibility.

- **Regional characterization of gravity field:** computationally efficient methods for representing the regional gravity field by combining different data sets.

- **Regional characterization of the crustal magnetic field:** computationally efficient methods for representing the crustal field by combining different data sets.

EDUCATION

PhD Geophysics

Observatório Nacional, *Brazil*

Dec/2010 – Jan/2013

Title (portuguese): "Processamento e inversão de dados de campos potenciais: Novas abordagens"
Title (english): "Processing and inversion of potential field data: New approaches"
Advisor: Dr. Valeria C. F. Barbosa
Descritpion: This work presents two new methodologies for processing and interpreting potential field data. The first one is the Polynomial Equivalent Layer, which is a cost-effective method for processing large potential-field data sets via the equivalent-layer technique. The second is a non-linear method for inverting gravity-gradient data to estimate the shape of isolated 3-D geological bodies.

MSc Geophysics

Observatório Nacional, *Brazil*

Mar/2009 – Nov/2010

Title (portuguese): "Inversão gravimétrica radial por camadas para a reconstrução de corpos geológicos 3D"
Title (english): "Radial gravity inversion by layers for retrieving 3D geological bodies"
Advisor: Dr. Valeria C. F. Barbosa
Descritpion: This work presents a gravity-inversion method for estimating the geometry of a 3D source. The subsurface region containing the geologic source is discretized into an ensemble of vertically juxtaposed prisms. By estimating the coordinates of the horizontal section of each prism, the method retrieves a set of polygonal horizontal sections representing depth slices of the 3D gravity source.

BSc Geophysics

University of São Paulo, *Brazil*

Mar/2004 – Dec/2008

Title (portuguese): "Modelagem gravimétrica 3D da borda norte da Bacia do Paraná"
Title (english): "3D gravity modelling of the northern border of the Paraná basin"
Advisor: Dr. Yara R. Marangoni
Descritpion: This work presents a geological model of the northern border of the Paraná basin obtained from gravity data.
